**Program #1**

**Create a program in which the user enters their name (into a character array) and then have the program print that name off backwards with an * between each letter. Then have the program ask the user if they would like to try again.**

**Output might look a little like this:**

     **Enter your name:   Josh**

     **Your name backwards is :   h * s * o * J**

     **Would you like to try again(y/n)? y**

     **Enter your name:   ABCDEFG**

     **Your name backwards is :   G * F * E * D * C * B * A**

     **Would you like to try again(y/n)? n**

**Hand it as a pdf with a screen shot of the output of the working program into iLearn dropbox.**
